

CLAIMS:

1. (Cancelled)
2. (Previously Amended) The restoration procedure kit according to claim 49 wherein the cover is spaced from the composite and not direct contact therewith.
3. (Previously Amended) The restoration procedure kit according to claim 2 wherein the cover is dome-like and disposed at a distance from the composite.
4. (Cancelled)
5. (Previously Amended) The restoration procedure kit according to claim 49 wherein the cover is coated with a nonadhesive, release coating material.
6. (Previously Amended) The restoration procedure kit according to claim 5 and the cover is in direct contact with the composite.
7. (Cancelled)
8. (Previously Amended) The restoration procedure kit according to claim 46 wherein the ends of the embrasure tabs are folded under themselves at the central portion of the carrier film.
9. (Previously Amended) The restoration procedure kit according to claim 8 wherein the incisal tab is folded under itself at the central portion of the carrier film.
10. (Previously Amended) The restoration procedure kit according to claim 9 wherein a plurality of unit packages are disposed serially in side-by-side relation in compules on a

packaging strip.

11. (Cancelled)

12. (Previously Amended) The restoration procedure kit according to claim 10 wherein the compules and said packaging strip are perforated between adjacent packages.

13. through 45 (Cancelled)

46.(Previously Added) A tooth restoration procedure kit including a unit dose of a curable dental restorative composite, the composite dose disposed on a carrier for spatuling on a tooth intermediate the tooth and carrier, comprising:

a generally “T” shaped transparent, high tensile strength polyester carrier film having a delivery side and a spatuling side, the generally horizontal portion of said “T” shape forming embrasure tabs extending laterally outwardly of the center portion of said “T” shape, and the generally vertical portion of said “T” shape forming an incisal tab extending downwardly of the center portion of said “T” shape; and

a unit dose of curable dental restorative composite disposed on the delivery side of said carrier film, centrally located on the center portion and centrally in respect of said embrasure tabs and incisal tab;

whereby, when said composite unit dose is disposed directly on said tooth, and said embrasure tabs are disposed about the embrasures of the tooth and said incisal tab is disposed about the incisal of the tooth, the dental composite may be spatuled on the tooth through said carrier film.

47. (Previously Added) The restoration procedure kit according to claim 46 wherein the embrasure tabs of said carrier film have a length to surround the tooth opposite the composite.

48. (Previously Added) The restoration procedure kit according to claim 47 wherein the

incisal tab of said carrier film has a length to surround the tooth opposite the composite.

49. (Previously Added) The restoration procedure kit according to claim 46 wherein a cover is disposed on said delivery side of said carrier film covering said composite dose.
